

Weekly Report

Group Number and Project Name need to be in subject line!

Date: 10/27/14

Project Name: Flow-Through Uroflow Device

Group Number: Group 32

Group Members: Jordan Nick, Jodi Small, and Akhil Sundar

Current status of project:

We have just completed the second phase of our project, which is brainstorming and selecting a prototype solution. We have chosen to continue forward with the design idea of using a force plate with a basin/funnel. The details of our choice are in our progress report.

Work planned for next week:

The next step in our project is to start on the prototyping. Our first step will be to look into the software/computer science portion of the project that will be necessary to transfer data between the force plate and our application. In parallel, we will also start designing the mechanical part of the device – starting with a CAD model.

Anything needed from client or TA or instructor to continue work:
